FIRST HIT, THE TUMOR
Systemic frailty linked to worse outcome
7
Cognition impaired before surgery
8
Inflammatory or tumor-tissue markers
7
SECOND HIT, SURGERY AND ANESTHESIA
New diffusion-weighted lesions after resection
6
Postoperative rise of brain injury markers
4
Delirium or agitation
7
Hemodynamic findings
3
LINK BETWEEN THE TWO HITS
Preoperative state predicts postoperative course
4
Interventions aimed at the second hit
11
Interaction between the hits tested
